Note:

- Production Capacity Please provide the information on Production Capacity of each of the Schedule 2 Chemical anticipated to be produced, processed and/or consumed at the Plant:
 - **Production Capacity** is defined as the annual quantitative potential for manufacturing a specific chemical based on the technological process actually used or, if the process is not yet operational, planned to be used at the relevant facility. It can be calculated based on one of the following
 - Nameplate Capacity: the production output under conditions optimized for maximum quantity for the production facility, as
 demonstrated by one or more test-runs.
 - Design Capacity: the corresponding theoretically calculated production output.

	<u>Sough, Gapachy</u> , the corresponding theoretically calculated production output.
